Dyson Vacuums Special Reviews for Picky Shoppers

The Dyson line of vacuum cleaners is known for wonderful construction and very powerful suction. But this is sensible thinking because the line targets people who have various allergies. This means that this line was developed to be more than average when cleaning floors and carpets. Plenty of people like that Dyson vacuums are bagless. They also have a HEPA filter that can be washed and used for a lifetime. What you will see is that their trademarked spinning technology is very good for getting rid of dirt as it is sucked into the chamber. This article offers [Dyson vacuum reviews](#) for selected models in their line.

The [Dyson](#) DC28 Animal was created for anyone who has pets. The DC28 uses both Air Muscle and Root Cyclone technology in order to remove dirt and dander. The Air Muscle trademark technology has Dyson parts that were made specifically by the company. The three components are: driven cam, hi-torque clutch, and a pneumatic actuator. These are mechanical components that are part of the overall design for floor cleaning. The unit uses a HEPA filter that is a lifetime filter you can wash.

You will realize that the Dyson DC28 is highly superior for handling pet dander and pet hair. The DC28 is exceptional for cleaning in harder to access locations due to the mini turbine head design. The ergonomic attributes with this vacuum cleaner comes from the fact that the simple to use buttons that it has. There are even automatic buttons that modify the brush bar according to the carpet pile. This same attribute will turn off the brush bar in accordance to the floor surface too. The DC28 comes with a telescopic wand that will extend up to 16 feet, and the power cord is a whopping 35 feet long.

The Dyson DC22 Turbinehead Canister Vacuum Cleaner is next on our list of reviews. The DC22 is driven by the Dyson digital motor that is a pretty amazing motor. The reason we say this is because it is one third the size of the normal Dyson motors, yet it still retains a high degree of suction power. This unit also uses a high quality HEPA filter without the use of bags to dispose of. There are some complaints about its overall weight and the short length of cord it comes with.

A majority of Dyson's vacuums are certified by saying the air that is emitted is over one hundred percent cleaner than breathing air. The air has less mold and bacteria, which is perfect for people who suffer from asthma and allergies. This occurs because Dyson has HEPA filters on its vacuums. Dyson vacuums are the same as other products because they have good and bad things about them. A few people dislike how loud Dyson vacuum cleaners can get. But, maybe this is the sacrifice you make for the suction that these vacuums get.
