# **Samsung UE40D7000 LED TV Review**

The Samsung UE40D7000 is a 40-inch high definition television set formulated by Samsung. It has a 1080p resolution which allows the system to provide high screen resolution in the form of far better colors, brightness and image quality. In addition, the Auto Motion Plus element works on stopping blurring when displaying high speed images.

The **Samsung UE40D7000 review** here also has a specific Wi-Fi enabled system that allows the panel to be connected to a wireless broadband network.

This function has been integrated so that the consumer may get internet connectivity to the net by means of this telly even if they are not connected to the world wide web by a LAN cable.

Another function of the UE40D7000 set from Samsung is that it gives the consumer Skype connectivity by means of the television set. This function allows the consumer to make totally free telephone calls to pals and family over the world wide web so that no fees are incurred by the consumer.

The function also contains interaction with the other individual on a face to face basis so that the consumer can see whom he is talking to.

In comparison with employing Skype on the computer, the makers aim to give customers the experience of employing Skype on the *Samsung UE40D7000*.

- 40 inch Full HD Panel
- Samsung Apps
- Skype – YES
- Smart TV
- Smart Hub
- High Def Freeview Tuner
- 1920 x 1080 resolution
- 3D HyperReal Engine & Wide Colour Enhancer for improved graphics
- HDMI – 4 Ports

The Samsung UE40D7000 LED Television also has a function that allows a USB or digital camera to be connected to the television. Making use of this function, the consumer can plug in a digital still or film camera and view photographs and movies on this large screen.

This LED Television can also be connected to the home computer and entertainment system which allows music and movies from these sources to be viewed on this 40 inch beauty as well.

The Samsung UE40D7000 employs a specific to provide what it calls an ultra-clear panel.

This technology permits the television screen to absorb the light from the surroundings so that the glare from an overhead light bulb or tube light does not reflect off the screen to obstruct the viewing of the image.
