# Things You Need To Know About Dyson Vacuums

We confess that many times shopping for most things can be boring and difficult. If you are searching for a Dyson vacuum, or a basic vacuum cleaner, then you have a lot to think about. Because of technology, a lot of things are better than ever. Of course, you have newer models competing with old standards. Dyson vacuums are rated very well for their tough build, advanced technology, and their clever thinking that obviously became part of their vacuum line. If you have problems with the quality of the air and have allergies, then you might want to see what they have available. We hope that this [Dyson vacuum reviews](#) will help you to choose the right model to buy.

The [Dyson](#) DC28 Animal was created for anyone who has pets. The DC28 uses both Airmuscle and Root Cyclone technology in order to remove dirt and dander. The Airmuscle trademark technology has Dyson parts that were made specifically by the company. The three components are: driven cam, hi-torque clutch, and a pneumatic actuator. These are mechanical components that are part of the overall design for floor cleaning. The unit uses a HEPA filter that is a lifetime filter you can wash.

The Dyson DC23 TurbineHead Canister vacuum has a powerful suction power that boasts 220 watts of air. Although all Dyson vacuum cleaners have the Root Cyclone technology for getting dirt from the air, the DC23 TurbineHead has a better version called Level 3 Root Cyclone. This version simply adds more power to the suction capability of the vacuum. The TurbineHead brush bar is effective for vacuuming both short and medium pile carpets. Also, this bar can be taken off if you want to clean hard floors.

If it suits your needs, you can acquire the Dyson Asthma and Allergy Cleaning Kit to be used on any of their home units. This is a set of three attachments for heavy duty cleaning. If you have any type of allergy related to airborne particles, then this is a kit that you may want to give serious attention. The primary advantages include the ability to rid your bed of allergens and mites, plus you can more effectively reach all those small places around the house. Plus the attachments are engineered for compatibility with any Dyson vacuum unit.

You will soon see that Dyson machines are specifically formulated for people with allergies or pet dander.

Pet dander has a way of accumulating in your carpet and disposal can become quite difficult. On the other hand the HEPA filtration systems are economical and effective for this purpose not to mention easily washable. We all know that HEPA's can be expensive, and at least you will not need to replace them.
